Do you know?

Avecinnia plants have roots above the ground.

Let us Do

Take two small potted plants. Cut the root of one of the plants and fix it in the pot. Now water the plants for two to three days. You will observe that the plant without roots will wilt and die. In the absence of roots, plants die.

This acivity proves that the function of the roots is to absorb _____ and _____ from the soil.

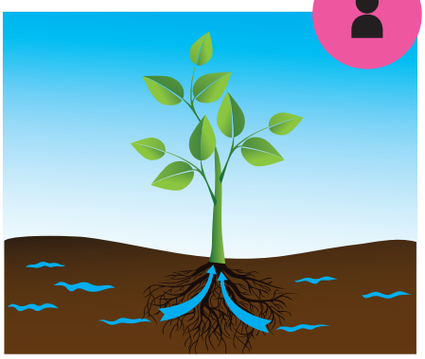

Let us Do

Take two coconut shells. Fill them with soil. Sow green gram in one and paddy in another. Keep them under sunlight and water them. After a week observe the features of roots.

Let us Write

True or false.

1. The roots grow into the soil.
2. Fibrous root has a main root.
3. Root absorbs water from soil.
4. Potato stores food in its root.
5. Grass has fibrous roots.

II. Stem

The stem is the main part of the shoot system. It grows towards the sunlight. It looks green when it is young. Branches, leaves, buds, flowers and fruits grow from the stem.

Coriander

Banyan Tree
