Inhalation is the process of taking the air inside and exhalation is the process of releasing the air outside. This **cyclical process of inhalation and exhalation is called breathing.**

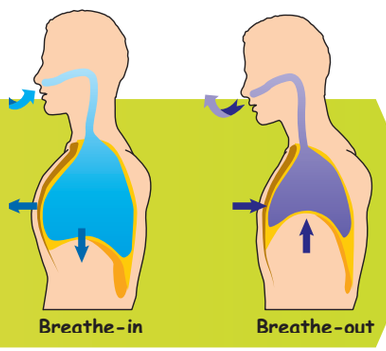

We take oxygen and release carbon dioxide gas while breathing.

Think zone: Why the doctor checks your pulse when you are sick and ask you to breathe in and breathe out?

Do you know?

When we breathe-in our chest raises up and when we breathe-out it lowers down.

Let Us Do

Tick (✓) the one which breathes and cross (X) the one that does not breathe.

Let Us Write

Choose and write the correct answer for the following actions.

S.No	Actions	Inhalation / Exhalation
1	Air moves out of the lungs	
2	Air goes into the lungs	
3	Chest raises up	
4	Chest lowers down
