

Son: Oh! Really?

Father: The another most useful mineral is **Potash**.

Son: What are the uses of **Potash**?

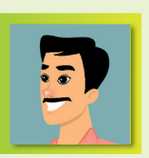

Father: 95% of **Potash** is used for making **fertilizers**. If the soil does not have enough potassium, potash **fertilizers** are used to improve the quality of soil. The remaining 5% potash is used in commercial and industrial products such as soap.

Son: Thank you, Dad. This has been very useful. I am going to share this with my friends.

Father: That's a good idea! Son.
