## Let us express this in a number line

## Repeated subtraction statement 30 - 5 - 5 -5 - 5 -5 -5 = 0

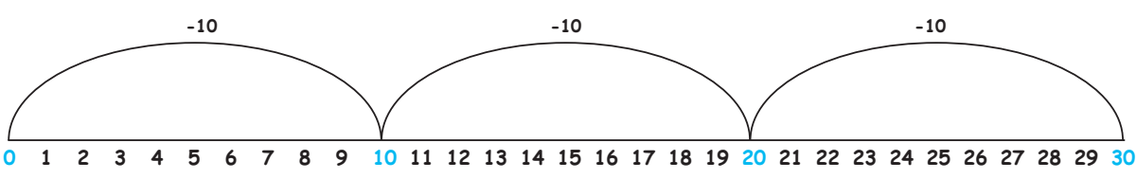

Kabilan distributed **30 mangoes** among **5 of his friends** by giving them one mango in each step.Thus each friend has got **6 mangoes**.

## Imagine Kabilan has to share these 30 mangoes among 10 of his friends.

| Number of steps | Number of mangoes with Kabilan | Friends | | | | | | | | | | Number of mangoes remaining |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | F1 | F2 | F3 | F4 | F5 | F6 | F7 | F8 | F9 | F10 | |
| Step 1 | 30 |  | | | | | | | | | | 20 |
| Step 2 | 20 |  | | | | | | | | | | 10 |
| Step 3 | 10 |  | | | | | | | | | | 0 |
| Total number of mangoes each had at the end | 0 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 0 |

**Number of steps = 3**

## The number line for the above situation:

## Repeated subtraction statement 30 -10 -10 - 10 = 0

This time Kabilan has shared **30 mangoes** among **10 of his friends** in **3 steps**. Each friends has got **3 mangoes**.
