Today we travel by road using scooters, auto rickshaws, cars, buses, vans, trains. A train can carry many more people than a bus or a van. We travel in the air using aeroplanes and helicopters and on water using ships and boats.

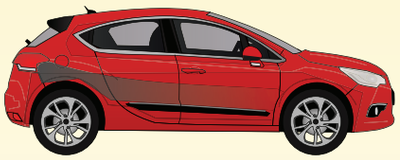

We can travel long distances in a short time using these modes of transport. They need fuel (petrol or diesel) to move.

Ship

Train

The fire engine and the ambulance are special vehicles. A fire engine helps us to put out fires. An ambulance helps to take sick people to hospital.

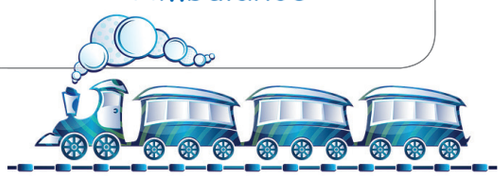

Fire and Rescue vehicle

Always give way to these vehicles

Ambulance
