Lizard

Have you seen a lizard clinging upside down on the ceiling? Lizards have toe pads that help them stick on to the wall. If the tail of the lizard is cut, it grows back in one or two months.

Spider

Do you remember that insects have only six legs? Spiders are not insects because they have eight legs. Spiders make threads called spider silk with which they create spider webs. The threads in the web are very strong and sticky. The webs help the spider catch insects like flies for its food.

Dog

Dogs can smell much better than us. They can even hear very soft sounds and sounds from far away. They are trained and used by the police to identify thieves. These dogs are called sniffer dogs. They are also used to search for people during natural disasters like earth quakes.
