Play time

Kuzhali explained the steps to play the board game ludo.

- Two to four players can play this board game by rolling a dice.
- Each player will have four coins at the bay. The aim of the game is to take all four coins to the end point. Player who does this first will be the winner.
- The player can take each of his coin from the bay to the starting point only when he gets one on the dice and moves from there as per the number for on the dice.
- A player can put his opponent's coin back to the bay when his coin gets to occupy the same position as that of the opponent's coin.
- Then the opponent should move the coin once again from the starting point only when he gets one on the dice.
