Unit 4

Day and Night

You will learn about

- The sky during the day and night
- Rhythms of the day and night
- Directions

Observe the picture. What do you see?

The Sun

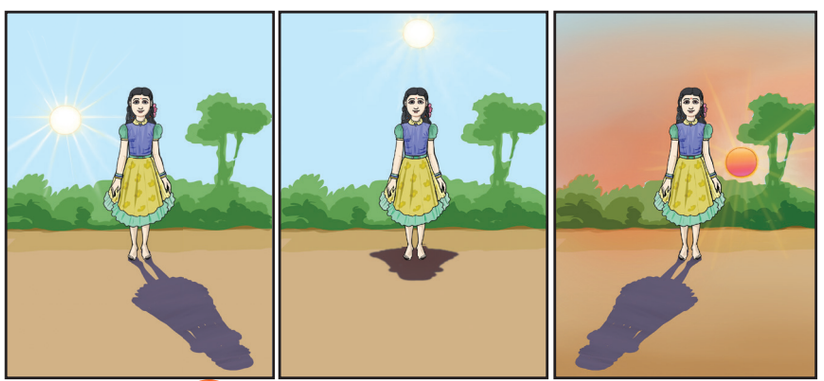

The Sun gives us light and heat. It helps plants grow. The Sun is much bigger than the earth where we live. The Sun looks small because it is far away from the earth. There will be no life on earth if there is no Sun.

DO YOU KNOW? The sunlight takes around 8 minutes to reach the earth.

Shadow

When an object does not allow light to pass through it, a dark area is formed. This is called a shadow.

Stand with your back to Sun. Look at the ground in front of you. What you see is your shadow. Find out if your shadow moves with you.
