Force can stop a moving object

An object stops moving when we apply force in the opposite direction.

- Have you played football game?
- How will you stop the ball?
- The goal keeper applies force and stops the ball.

Force can change the shape

- When an inflated balloon or water balloon is pressed, some force is applied on both sides of the balloon. Thus, it changes its shape.
- While squeezing a plastic water bottle force is applied on all sides of the bottle. Thus, the shape and size of the bottle is changed.

Less force is required in pulling than in pushing. So it is easy to pull than push an object.

Match the following.

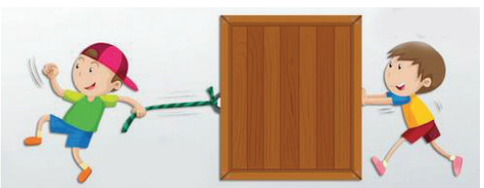

Stops the motion

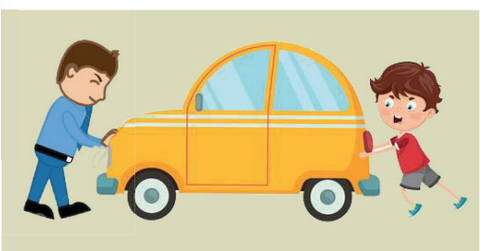

Changes the direction

Changes the shape

Changes the speed
