Let us measure the boiling point of water using thermometer

Boiling point of water is 100°C

Things Needed : Water and thermometer

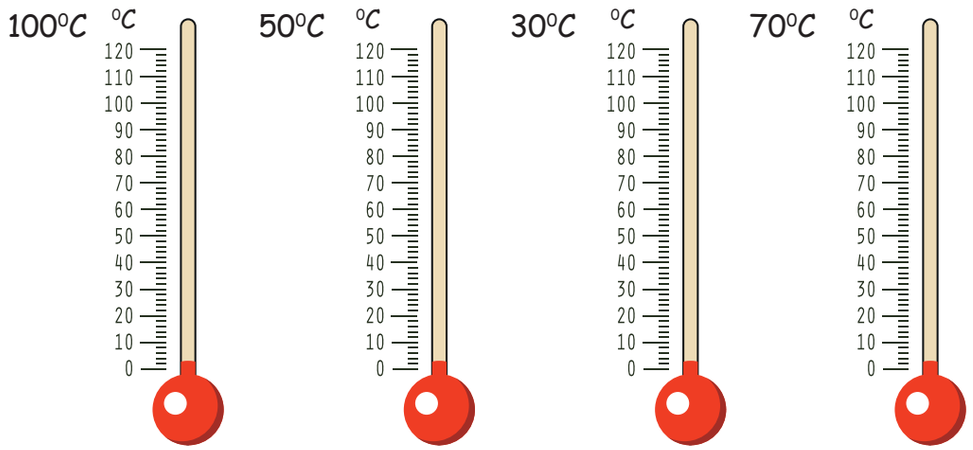

Procedure :

Heat the water. Measure the initial temperature, when the water starts to boil. Allow it to boil for few more minutes, measure the temperature.

The temperature remains the same when the boiling point reaches 100°C and continues to boil for some more time.

Similarly, the boiling point of milk can also be measured using thermometer.

Colour the thermometer to match the temperature written in the box.

EVALUATION

I. Say whether the following statements are true or false.

1. When we boil water, bacteria are destroyed.
2. Idli is cooked by the process called steaming.
3. Thermometer is used to measure pressure.
4. Refrigerator helps to keep things cold.
5. Garlic relieves hiccups and nausea.
6. Boiling point of water is 100°C.

EB9ZBJ

II Circle the name of the things from which idli is made.

Rice	Groundnut	Chilli	Black gram	Red gram
Water	Salt	Pepper	Sugar	Fenugreek
