II. Protecting Sense organs

Sense organs help us to observe and understand the world around us. There are five main ways we can do this: through sight (with our eyes), touch (with our skin), smell (with our nose), taste (with our tongue) and hearing (with our ears).

The ways by which we can take care of our sense organs are given below.

By nature, all the sense organs have some ways to protect themselves. For example, the eyelids and lashes protect the eyes from dust and other foreign particles.

How should we take care of our sense organs ?

Think Zone

Anu plays with her baby brother. As he cries, she gives him a pencil. On seeing this, Anu's mom was shocked. She quickly takes the pencil back. Do you know why?

EYES

Do's	Don'ts
❖ Read with proper light.	❖ Don't read in too dim or too bright light.
❖ Watch television from a minimum distance of 6 feet.	❖ Don't play video games or watch TV for a long time.
❖ If you feel your eyes are itchy, wash them with clean and cold water.	❖ Don't rub your eyes with your fist.

If you find it difficult to read the classroom board from your place, tell your teacher/parents and consult a doctor. You must follow the suggestions of an **Ophthalmologist** or eye doctor.

A condition known as digital eye strain is common among people working at computers all day. This condition leads to dry eyes, eye strain, blurred vision and headache.
