LIQUIDS

Let us Do

1. Place four 1L bottles of different shapes on the table.
2. Take a bucket with water.
3. Call one child to hold the empty bottles and the other to fill water into them using a paper cup.
4. Ask the other children to fill the table as given below.

	Bottle 1	Bottle 2	Bottle 3	Bottle 4
Number of cups used				
Shape of bottle (Draw)				

Think Zone

1. What is the shape of water in your bottle?
2. What happens if you pour water on the floor or table?

Did each bottle need the same number of cups to get filled?

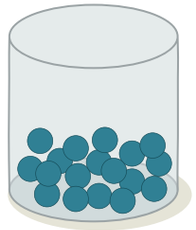

We can see that water takes up the same space in each bottle and the shape of the water is same as the shape of the bottle.

Look at these pictures

Here we can see that the shape of the liquid is determined by the shape of the container.

kerosene in bottle	Oil in cane/ bottle	Milk in the jug	Juice in glass	Water in the glass
				

Liquids are the things that do not have a definite shape but occupies space. They have a definite volume. They take the shape of the container in which they are filled. The water moves from one place to another. This is because the matter in liquid are loosely packed. So, liquids can flow freely.
