Let us Touch and Feel

Different types of liquids are placed in separate containers. Students are allowed to touch and feel every type of liquid. They are asked to tell the type of the liquids on the basis of their stickiness/concentration.

Greasy liquid	Sticky liquid	Watery liquid	Thick liquid
			

GASES

When a perfume is sprayed or an agarbatti is lighted, the fragrance spreads all around the room. How?

The matter in gases are very loosely packed. So they can move around freely in all directions. Hence, gases do not have a definite shape and do not occupy a definite space or volume.

Most of the gases are colourless. But when they are mixed with solid particles they show distinct colours.

Think Zone

Cooking gas in gas-cylinder has a smell. Why?

Here are some examples for gases

Cloud

Smoke

Gas cylinder (LPG)

Spray

Water vapour

Wind
