

The ant replied, "No, we don't eat leaves! We drink the leaf **sap**. We also use the leaves to grow fungus. We need the fungus to feed our babies. We also store the leaves for the winter."

The ant asked, "By the way, do you, the humans save the food that you need?" Amir replied, "Yes we also save food in granaries, but we need money to buy it, so we usually give importance to save money. What else do we have to save?" "Don't you have anything other than money to save?", asked the ant. After taking some time to think, Amir answered, "My mom asks me to save water, food, electricity, forest and fuel. We have a lot of things to save, to make sure that future generations can use these." This interaction with the mole and the ant changed the way Amir thought about the things around him. Earlier, he let the fan run as he left the room. He let the water drip as he never closed the tap tightly. Now, he always care and save the resources around him.

Which one of these is the most important thing to save, food, water, electricity or money? Why? Discuss.

Glossary

digging	break up and move earth
traps	enclosure designed to catch and retain animals
paralyze	incapable of movement
sap	plant fluid
