IV. Reflection of Light

We sea the world around us with the help of **light**. Where do we get light from? Light may come either from the Sun or from other sources like an electric lamp or a bulb. The objects that give off light are called **light sources.**

When light falls on a transparent material it passes through it. However when light falls on a polished surface of an opaque material, it does not pass through it. It bounces back. The bouncing of light by any smooth or polished surface is called reflection.

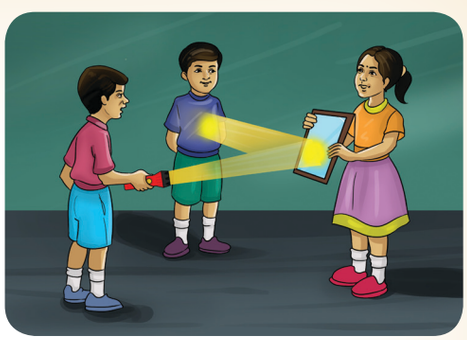

When you look into the mirror, you can see your own face on the mirror. What you see is a reflection of your face in the mirror. We also see reflections of other objects that are in front of the mirror. These reflections are formed by light and they are called **images.**

Try to Answer

Try to see your face on some materials like mirror, exam pad, new stainless steel plate, table top and water in a plate. What are the materials that show your face clearly? Do you know why?

Activity

Reflection of Light

Material Required/Needed

A plane mirror and a torch light

How to do?

1. Make your room dark by closing the door and windows.
2. Ask your friend to hold a mirror in his/her hand at one corner of the room.
3. Stand at another corner with a torch in your hand.
4. Switch it on.
5. Direct the light from the torch onto the mirror.
6. **Answer the following from your observation:**

   a) When you change the angle of the mirror, what happens to the light?

   b) Are you able to direct the reflected light using the mirror?
