Try to Answer

Match the following.

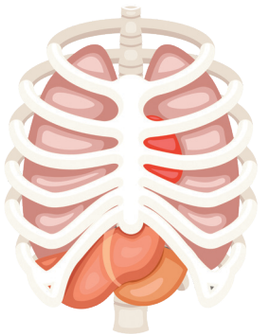

1. Pair of spongy sac	-	Stomach
2. 'J' shaped bag	-	Kidney
3. Filters excess water	-	Brain
4. Command centre	-	Heart
5. Pumps blood	-	Lungs

More to know

Exactly half of a single kidney is capable of doing the job that is performed by two kidneys together.

6. Bones and Muscles

Our body is made up of bones and muscles. Press your upper arms. The portion that feel hard to touch is the bone. The portion that feels soft to touch is the muscle.

The bones give us shape. They are the frame for our body and allow us to jump, run or just lie down. Bones also protect the internal parts of the body.

Muscles are the soft parts that cover our bones. They help us to move different parts of our body by contracting or relaxing, like a rubber band.

In order to maintain healthy bones we need to have healthy food, such as milk, cheese and eggs. For strong muscles, we need to exercise and stay active.
