more than 1/4. Now you gave the last piece (1/4) part to brother so you gave more (3/4) parts of the watermelon.

Mother : you Know, your brother never tolerate his hungry? I have milk for you, go and drink it.

The four equal pieces of the watermelon

A piece given to Muthamizh = 1/4

First a piece given to Sentamizh = 1/4

Again a piece given to Sentamizh = 2/4

Muthamizh Compares her piece of fruit with his brother and realizes that her mother gives more pieces to him than her. 2/4 is greater than 1/4 or

$$1/4 < 2/4$$

Sentamizh after finished his playing he ate one more piece = 1/4

So totally he ate = $\frac{3}{4}$ (three fourth)

Muthamizh now realize that $\frac{3}{4}$ is greater than 2/4, Muthamizh Compares all the three:

$\frac{3}{4}$ is greater than 1/4

$\frac{3}{4}$ is greater than $\frac{2}{4}$

Thus: $\frac{1}{4} < \frac{2}{4} < \frac{3}{4}$

$$\frac{1}{4} < \frac{2}{4} < \frac{3}{4}$$
