Water

Unit 2

Learning Objectives

After learning this lesson, students will be able to

- understand the change of states in water
- describe the water cycle
- explain the importance of water cycle
- summarise rainwater harvesting and its uses

B4F8M9

Introduction

Water is the most abundant and precious resource on the Earth. It is found in oceans, seas, rivers, streams, lakes, ponds and even under the ground. All living things need water to live and to do many other activities. We have already learnt about this in the previous classes. Let us learn more about water in this lesson.

I. Change of States in Water

Let us do

See the given pictures and write down the state of each objects.(Solid, Liquid, Gas)
