Do You Know?

1 inch of rainfall on a 2,000 sq.ft. roof is equal to 4,800 litres of water.

Benefits of rainwater harvesting

- It increases the ground water level
- It can be used for agriculture
- It increases the availability of water for living things

Rain water harvesting is the only way to conserve rain water

More to know

- The rain water harvesting was launched in the year 2001 by the Tamil Nadu government.
- Tamil Nadu is the first Indian state which made rainwater harvesting as mandatory.

Try to Answer

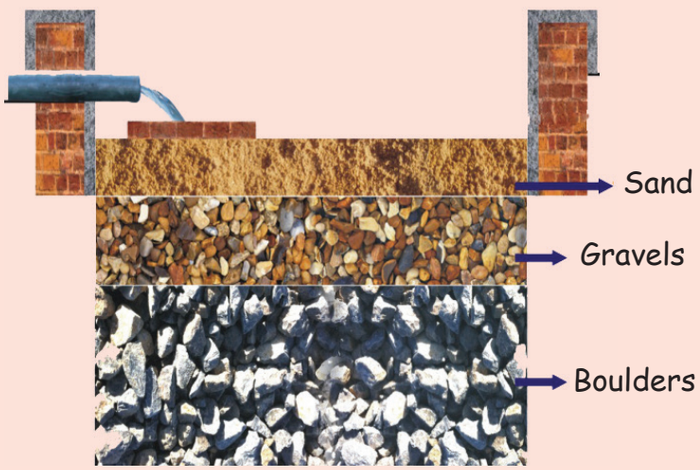

1. List out some other benefits of rain water harvesting.
2. Suggest some ideas to save rainwater in your school.

Let us do

Tips to construct a rainwater harvesting pit at school/home.

Construct a pit of any shape or size. It may be generally constructed, 1-2 metre wide and 2-3 metre depth. The pits can be filled with boulders, gravels and Coarse sand.

Put the boulders in the bottom, sand in the top and gravels in the middle.
