Without primary producers, living things that are not capable of producing their own food and will not be able to live.

Think and answer

Why would living things not be able to live without plants?

Try to Answer

Fill in the blanks by rearranging the letters in the bracket.

1. During photosynthesis plants releases _____ (egxyno).
2. _____ is a primary producer (tanpl).
3. Stomata are seen in the _____ (owler) surface of the leaf.
4. Pigment involved in the food synthesis is _____ (phllylochor).

More to know

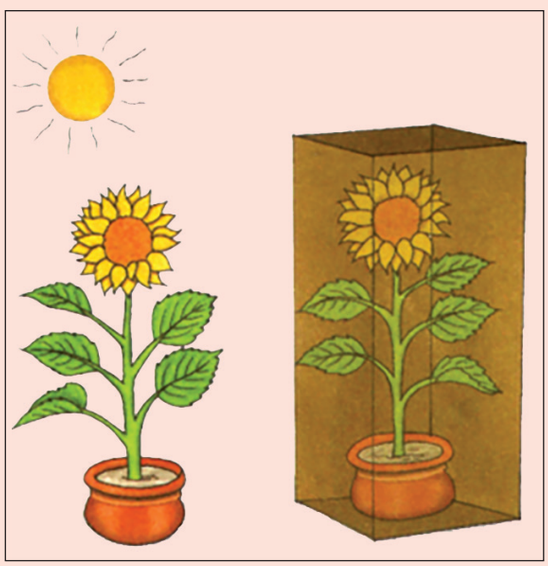

Plants like cactus do not have leaves. Their food is made in their green stems.

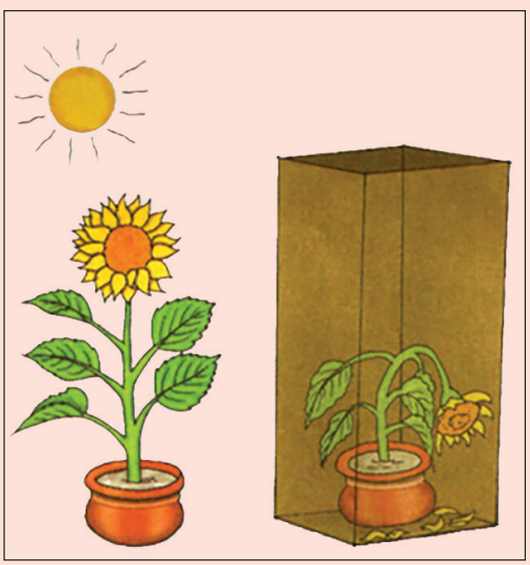

Let us do

Take two potted plants. Keep one in sunlight and other in a fully covered box. Water them regularly. After a week observe the plants.

Before a week

After a week

What did you observe?	Plant in sunlight	Plant in box
