Division of three digit number by one digit number:

Division without remainder

EXAMPLE 1

Divide 450 by 6.

	075	**Quotient**
6	450	
	42	
	30	
	30	
	0	**Remainder**

Step 1: Take 4 in the dividend, Which is not divisible by 6. Hence to combine the next digit in the dividend in the right. We have to put zero above the division line.

Step 2: Divide 45 by 6.

6 divides 45, 7 times, (ie) 6 x 7 = 42

place 42 belows 45,

Quotient = 7 and Remainder = 3

Step:3: Take 30, Divide 30 by 6,

Quotient = 5, Remainder = 0.

EXAMPLE 2

A fruit seller buys 531 apples. He arranges them equally in 9 boxes. How many apples does he put in each box?

Total number of apples = 531

Number of boxes = 9

Number of apples in each box = 531 ÷ 9

	59	**Quotient**
9	531	
	45	
	81	
	81	
	0	**Remainder**

Number of apples in each box = 59
