1. **Separation of Waste:** This is a very important step in waste management. It means to sort or divide the waste into different waste bins. Each bin should have different type of wastes. It is good to separate waste in three different bins. Green for biodegradable waste, Blue for recyclable waste and Red for non-recyclable waste. Non-biodegradable waste can be classified as recyclable and non-recyclable.

Biodegradable Recyclable Non-recyclable

2. **Waste collection and transportation:** Once we separate our waste in our homes and schools, it is important to keep it ready to be picked up by our municipality or corporation. Picking up the waste is called Waste collection. Moving the waste from one place to another is called Transportation.

3. **Waste recycling and composting:** Biodegradable waste is taken to a place where it can be converted into compost. Compost makes the soil fertile. Non-biodegradable waste that can be turned into something new (recyclable waste) and valuable is taken to recycling factory.
